

## ABSTRACT

A glasses structure has a lens frame and a temple. The lens frame has a curved portion disposed at a side thereof and a shaft portion downwardly extending from the curved portion. The temple has a positioning portion disposed at an end thereof, a position opening defined inside the positioning portion, a bushing portion downwardly extending from the positioning portion and a hole defined inside the bushing portion. The shaft portion of the lens frame is inserted into the hole of the temple and the curved portion of the lens frame is held in the position opening of the temple so that the temple pivots on the lens frame.
